

The SpineCor

Pain Relief Back Brace

A new and innovative approach to spinal treatment in adults targets pain relief by providing Postural Rehabilitation and Spinal Offloading

The SpineCor® Pain Relief Back Brace provides postural rehabilitation to change spinal shape and loading.

During a 2-year development process, clinical testing with the SpineCor Pain Relief Back Brace was performed on 200 patients. Some of these patients reported pain relief within hours of the first application. Of all patients treated, 90% reported relief within 6 weeks of use.

Initially, the brace is worn 8 – 16 hours per day in order to initiate postural changes. After several months of wear, it is often possible to reduce wearing time while maintaining pain relief.

Indications: The SpineCor® Pain Relief Back Brace is indicated for mechanical back pain related to:

- Adult De-novo Scoliosis
- Degenerative Adult Adolescent Idiopathic Scoliosis
- Hyper Kyphosis
- Postural Scoliosis
- Chronic Antalgic Scoliosis
- Post Traumatic Scoliosis
- Spinal Stenosis related to spinal misalignment
- Poor Posture

Treatment with the SpineCor® Pain Relief Back Brace should be prescribed and monitored by a physician.

Training: Becker Orthopedic and the SpineCorporation require certified orthotists to participate in our newly designed online training program. Please contact Theresa Mozak at **(800) 521-2192**, or email her at **tmozak@beckerorthopedic.net** for information regarding online and group training opportunities.

Note: Orthotists who have already completed SpineCor® Dynamic Corrective Brace Training will be able to order the Pain Relief Back Brace after successfully completing a single online training module.
